OVERVIEW

- Official Area Name: Hyer Woods Conservation Area, # 7608
- **Year of Initial Acquisition:** 1976 leased to the Missouri Department of Conservation (the Department) by The Nature Conservancy; 1998 deeded to the Department
- Acreage: 30 acres
- County: Dent
- **Division with Administrative Responsibility:** Forestry
- **Division with Maintenance Responsibility:** Forestry
- Statements of Purpose:
 - A. Strategic Direction

Manage sustainable plant communities. Provide educational and recreational opportunities for the public.

B. Desired Future Condition

The desired future condition is a healthy forest that will encourage educational opportunities and recreational use.

C. Federal Aid Statement

N/A

GENERAL INFORMATION AND CONDITIONS

I. Special Considerations

- A. Priority Areas: Dry Fork Fisheries Priority Watershed
- B. Natural Areas: None

II. Important Natural Features and Resources

- **A. Species of Conservation Concern:** None observed. A plant inventory was conducted on the area in 1975. At that time no species of conservation concern were known from this area.
- B. Caves: None
- C. Springs: Yes, records kept with the Department Natural History Biologist.
- **D. Other:** A remnant Ozark hardwood climax forest with white oak predominating; small limestone bluffs, ranging from very dry to continually wet, support several micro plant communities.

III. Existing Infrastructure

- 1 parking lot
- 1 area sign, depicting the land donation
- 1 grassy hiking trail to the southernmost spring

IV. Area Restrictions or Limitations

- A. Deed Restrictions or Ownership Considerations: None known.
- **B.** Federal Interest: Federal funds may be used in the management of this land. Fish and wildlife agencies may not allow recreational activities and related facilities that would interfere with the purpose for which the State is managing the land. Other uses may be acceptable and must be assessed in each specific situation.
- C. Easements: None known.
- **D.** Cultural Resources Findings: No known cultural resources.
- E. Hazards and Hazardous Materials: None observed.
- F. Endangered Species: None observed.
- **G. Boundary Issues:** None known at this time. In 2009 a survey was done for the southwest corner of the property.

MANAGEMENT CONSIDERATIONS

V. Terrestrial Resource Management Considerations

This area offers unique and interesting natural features, including large mature trees, small limestone bluffs, two springs and a creek.

Challenges and Opportunities:

- 1) Manage the forest community to sustain the climax forest.
- 2) Protect the springs and small limestone bluff communities.
- 3) Control invasive or exotic plant and animal species.

Management Objective 1: Manage the forest community to sustain the climax forest.

Strategy 1: Maintain the current annual inspections to check for insect and disease outbreaks and die back. (Forestry)

Strategy 2: Periodically monitor the area for seedling recruitment and other forest community issues. (Forestry)

Management Objective 2: Protect the springs and small limestone bluff communities.

Strategy 1: Deter restricted uses of the area, especially around the springs and bluffs. (Forestry)

Strategy 2: Determine the feasibility of constructing a wooded bridge over the rock wall of the developed spring to keep foot traffic off it. (Forestry)

Strategy 3: If the mowed hiking trail is expanded throughout the area, it will be developed in stable areas to protect the limestone bluff communities. (Forestry)

Management Objective 3: Control invasive or exotic plant and animal species.

Strategy 1: Monitor high priority exotic species (e.g., spotted knapweed, Japanese stilt grass and feral hogs). Eradicate and/or control these species, as is feasible. (Forestry, Wildlife)

VI. Aquatic Resource Management Considerations

Hyer Branch flows southwest to northeast through the property. It is a losing stream that is part of the recharge area for Meramec Spring in Phelps County. Hyer Branch flows into Dry Fork Creek, which is part of the upper Meramec River Drainage. The stream is considered a Fisheries Priority Watershed.

Challenges and Opportunities:

1) Protect the stream, riparian areas and areas around the two springs.

Management Objective 1: Minimize any in-stream disturbance or sediment inputs from area management or public use.

Strategy 1: Coordinate between divisions on any actions that require soil disturbance. Monitor stream banks and trails for active erosion that would deposit sediment into the stream. (Forestry, Fisheries, Design and Development) **Strategy 2:** Facilitate a good working relationship with neighboring landowners to ensure reduced inputs from neighboring steam banks and riparian areas. (Forestry, Fisheries, Private Lands Services)

VII. <u>Public Use Management Considerations</u>

Challenges and Opportunities:

- 1) Improve educational and interpretive opportunities.
- 2) Facilitate good working relationships with neighboring landowners.

Management Objective 1: Improve educational and interpretive opportunities.

Strategy 1: Maintain current geocache Special Use Permits with local geocachers. (Forestry)

Strategy 2: Determine the feasibility of constructing an overlook platform along the creek next to the spring at the end of the mowed hiking trail. (Forestry)

Strategy 3: Extend the mowed hiking trail through the area to provide more access and improve visibility of the area's limestone bluffs and other natural features. (Forestry)

Management Objective 2: Facilitate a good working relationship with neighboring landowners.

VIII. Administrative Considerations

Challenges and Opportunities:

- 1) Maintain area infrastructure.
- 2) Ensure Department boundaries are marked and visible to public users.
- 3) Acquisition of land.

Management Objective 1: Maintain area infrastructure.

Strategy 1: Maintain the current gravel parking lot. (Design and Development, Forestry)

Strategy 2: Maintain the sign describing the land donation and its visibility from the county road. (Forestry)

Management Objective 2: Ensure Department boundaries are marked and visible to public users.

Strategy 1: Maintain painted boundary lines and replace signs as needed. (Forestry)

Lands Proposed for Acquisition:

When available, adjacent land may be considered for acquisition from willing sellers. Tracts that improve area access, provide public use opportunities, contain unique natural communities and/or species of conservation concern, or meet other Department priorities, as identified in the annual Department land acquisition priorities, may be considered. (Forestry)

MANAGEMENT TIMETABLE

Strategies are considered ongoing unless listed in the following table:

	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25		
Terrestrial Resource Management												
Objective 2												
Strategy 2	X											
Strategy 3	X	X

Strategy 1					X					X		
Administrative Considerations												
Objective 1												
Strategy 1			X			X			X			
Strategy 2		X		X		X		X		X		
Objective 2												
Strategy 1					X					X		

APPENDICES

Area Background:

Hyer Woods was first donated to The Nature Conservancy by Mr. and Mrs. John Bowles as a memorial for Dr. John Hyer and other pioneer doctors of the Ozarks. The Nature Conservancy then leased it to the Department to manage in 1976. In 1998 The Nature Conservancy deeded the area to the Department. The area was classified as a natural area because it was/is a remnant of typical Ozark hardwood climax forest. Since the early classification, larger tracts of this same type have been found and classified as natural areas. Subsequently, in 2000, the area was declassified as a natural area. Since its declassification, management of the conservation area has focused on maintaining it in a pristine state.

The conservation area is primarily visited by its neighbors and has not been highly used. In 2011 Forestry reopened and graveled the old small parking lot and mowed the old trail to the bigger spring. A few months later, a local geocacher asked to place two geocaches on the area. Since then, more people have visited the area to look for the caches and enjoy a portion of the area.

The son-in-law of the land donator had hoped to have some type of rest area, picnic tables, etc. for people to stop and see/use the area. With the reopening of the parking lot and trail and the geocaches, more people are visiting and enjoying the area.

Current Land and Water Types:

Land/Water Type	Acres	Miles	% of Area
Upland Forest	20		67
Bottomland/Riparian Forest	10		33
Total	30		100
Stream Frontage		0.5
